

In the geopark area it is important also the **accommodation capacity**, for **tourists** but also **researchers** and **schools**.

There is a **network of professionals** who work in this domain.  
For example:

- The **receptionist** welcomes and helps the customers and often must work speaking different languages.

- The **chef/ cook** has the necessary formation on techniques of preparation food but also on safety depending on the european and national laws.

*GEOclimHOME Pro Geoheritage and climate change for highlighting the professional perspective*

- The **waiter/waitress** has direct contact with the customers and is responsible for the food or room services and often must work speaking different languages.

Often the local hospitality made use of **local food** and **beverage** producers and collaborate with local **artisans**.

About **local food** and **beverage** in the geoparks see also the [Geofood](#) project!

During the project we was hosted in many hotel, hostels and restaurants in many different municipalities of the [Sesia Val Grande Geopark](#)
