

Sustainable workplaces for a sustainable future

The idea is based on the example of the [Atlas of the professionals](#) of the University of Turin, that helps to move between **professionals workplace**, educational qualification and skills through videos forms and statistics to guide people in their **professional choices**. Other examples are also available for different target areas.

The **aim** of the association task is to build the base of a similar atlas wich can be implemented and spread as a model in other areas (other geoparks first, MAB areas,parks, WHs later) that require similar **skills resources**.

The Atlas describe the **professionals** met both during the surveys and meetings, that would be **involved** in the original program, and those actually involved in the experiences carried on in the [Sesia Val Grande Geopark](#) area during the **virtual or real transnational meetings**, that must be canceled or modified because of the Covid – 19.

GEOclimHOME Pro Geoheritage and climate change for highlighting the professional perspective
